AUGMENTED REALITY

REVIVRE

AN EXPERIENCE CO-PRODUCED WITH SAOLA STUDIO.

An augmented reality journey bringing extinct species back to life. Visitors put on augmented reality glasses and begin their journey to meet extraordinary species that our ancestors knew, but which are now extinct forever. They see these animals as if they were here, above a display case, on a railing, in a corridor, or just behind them.

A STATEMENT TO RAISE AWARENESS

The extinction of species is a natural phenomenon. But today, a single species is causing the extinction of many others, at a speed that exceeds that known in the history of life. "Revivre" raises awareness on biodiversity, on the necessary solidarity between species, the functioning of our ecosystems and their endangerment.

A SCRIPTED JOURNEY

In a fifteen minutes immersive visual journey, visitors discover extinct species while a voice-over and a spatialised soundscape guide their gaze. The narrative sheds light on the life of these species and their extinction, which has almost always the same cause: Human.

MODELLED SPECIES

Eleven species are modelled and animated in 3D. The passenger pigeon guides us from one species to another: from the Great Auk to the Sabre-toothed cat, via the Steller's Sea cow, the Aepyornis, the Saddle-backed Rodrigues giant Tortoise, the Thylacine, the Helmeted Hornbill, the Dodo, the Quagga or the Angola large flightless Dung Beetle.

Original experience, Grande
Galerie de l'Évolution, since 16 June 2021
